The use of the three former Tables of
use upon use, according to the rate of
6 in the hundred.

FOr the first, if you would know to how
much one pound stock amounts (at In-
terest upon Interest) in any number of years
not exceeding 31, seeke the number of years
in the first Columne towards your left hand,
under this word years, and there directly a-
gainst the same, you shall see the Sum desired.

Example.

Admit it be required to know how much
1 l. stock amounts at Interest upon Interest
in 21 years, look 21 under the word years,
and directly against the same you shall see
3 l. 7 s. 11 d. 2 q. which is the summe desired.

But suppose the Question were to finde the
increase of 10 l. stock in the same time, mul-
tiply the same by 10, or adde the same 10
times together, which makes 33 l. 19 s. 7 d.
which is also the summe desired. And thus
may you work upon any summe desired in
any of the other Columes observing the man-
ner as is before, as the Propositions nomina-
ted in the head of each colunne doe direct, and
thus much for compound Interest.

Now for simple Interest direct, I have
composed the following Tables, at the rate of
6 per centum, whose use is thus. Seek the sum
desired, and under the same, you shall have
the Interest due for one year, or any time un-
der, namely from one moneth to 12 as is
there expressed which of it selfe, is so plain,
that it needs no further explanation.

Interest at 6 per Centum for 300 l. is for each
mon. or 12 months as followeth:

1 Mon.	2 Mon.	3 Mon.	4 Mon.	5 Mon.	6 Mon.	7 Mon.	8 Mon.	9 Mon.	10 Mon.	11 Mon.	12 Mon.

The fractions in this latter Table. (being very small and but
of a farthing) are omitted as unnecessary.

Of the Eclipses this present yeare. 1658.

Accrding to the best Astronomicall Tables in being, there will be this yeare but two Eclipses of the Sun, and neither of them can be visible in England.

The first hapneth upon the 22. day of *May*, near 3 a clock in the morning, to be seen in India, and in the Philippine Ilands, where it will appeare almost to all.

The other hapneth upon the 14 of *November* neer eleven a clock at night, which will appeare to such people as live beyond the Equator, in the Ilands situate in the Western Ocean, viz. *Dalos Tubaronas*, & *De los Mongos*, &c. where it will be a great Eclipse, continuing from the beginning to the end about three houres and a halfe.

Because these two Solar Eclipses are this yeare both centrall in the space of six months, and one of them happens before the Suns Apogee, and the other after, therefore it comes to pass, that there can be no Eclipse of the Moon within the compasse of this yeare Lunar, as the learned Kepler judiciously observes, and yet Mr. *Andreas Argolus* (meerly for want of consideration) hath described two of the moon which is altogether contrarie to Art, and exact Calculation Astronomicall, as our Domestick Tyco (in his *Ephemer* of this year) hath sufficiently declared.

But the next yeare. 1659. will produce three visible Eclipses, namely two partill Eclipses of the Moon, and one of the Sun, which will be very conspicuous if the ayre be cleere, but for their time and quantity I shall not speake further now, till the next yeare.

This image shows a blank, aged, cream-colored page, likely an endpaper or flyleaf of a book. The paper has a textured appearance with visible creases, wrinkles, and some minor discoloration or foxing. There are faint, illegible markings scattered across the surface, which appear to be either bleed-through from the reverse side or very light pencil marks. The overall tone is off-white or light beige.

My dear Sir
I have just received your letter
of the 10th inst. and am
glad to hear that you are
well. I am well and hope
this letter will find you
the same. I have not much
news to write at present.
I am, Sir, very respectfully,
